

# Platform Datasheet

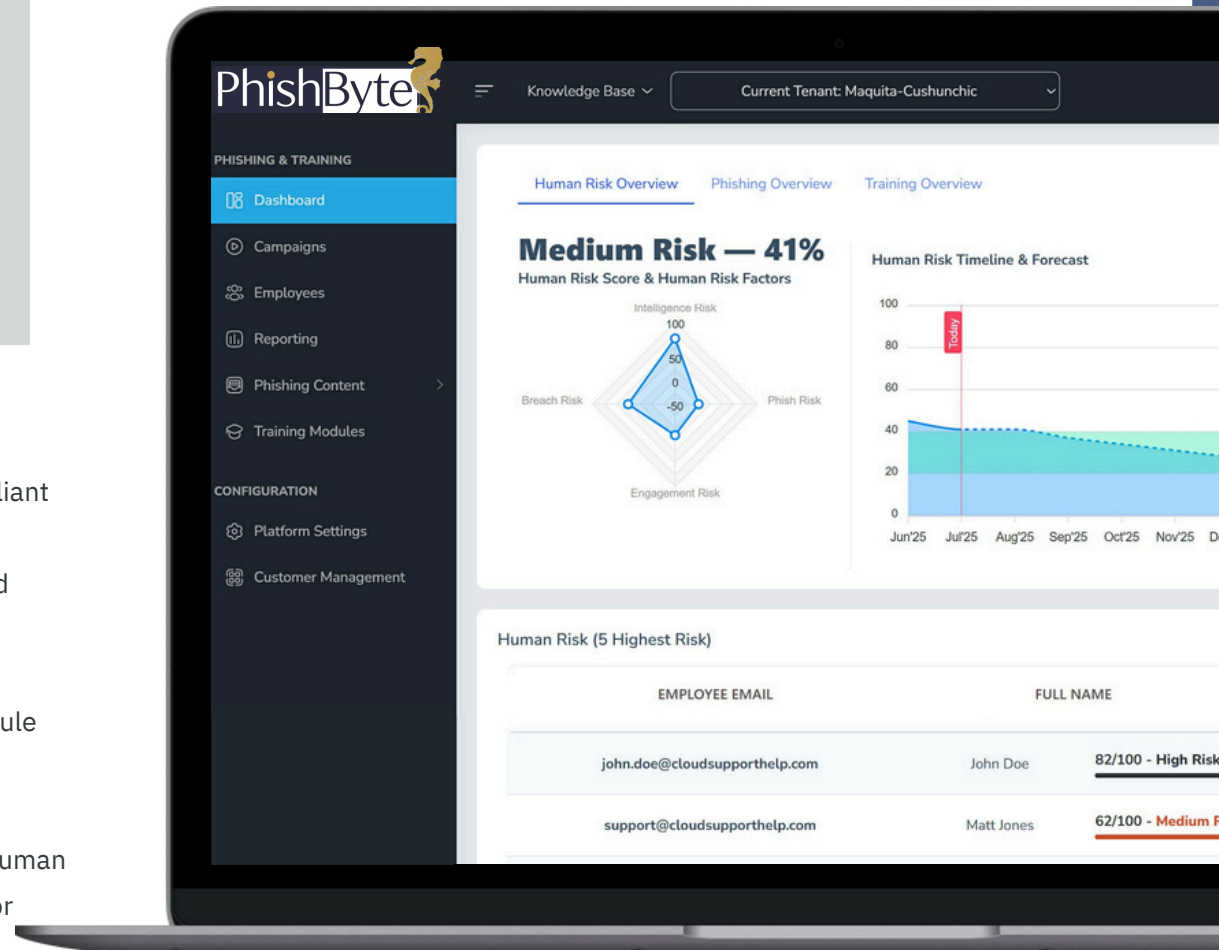

## Build team resilience. Reduce human risk.

PhishByte was built to make effective phishing and cyber security awareness training accessible to Australian small and medium businesses. The platform delivers realistic phishing simulations and practical, high-quality training designed to reflect how real attacks actually happen — without enterprise complexity or inflated pricing.

PhishByte removes the traditional sales-led approach to security training. There are no long sales cycles or aggressive upsells. The platform is simple, transparent, and designed to stand on its own. Organisations can start immediately with a free tier for up to 10 users, making it easy to test, learn, and prove value before scaling.

### Key Features

- ✓ Managed Mail Servers Managed
- ✓ Phishing Websites Configurable
- ✓ Infrastructure Animated
- ✓ Training Videos Gamification
- ✓ Dark Web Monitoring Automated
- ✓ Reporting Single Sign-On (SAML)
- ✓ Conversational AI Phishing
- ✓ Multi-Factor Authentication ID &
- ✓ Google Workspace Integration
- ✓ Risk Dashboard Security
- ✓ SOC 2 Audited & GDPR Compliant
- ✓ Report Phish Add-On Sender
- ✓ Domain Spoofing Unparalleled
- ✓ Customer Support Managed
- ✓ Service Provider Tools Email
- ✓ Template Editor Training Module
- ✓ Editor Multi-Language
- ✓ Functionality Voice Phishing
- ✓ Configurable Cloud Storage Human
- ✓ Awareness Program Generator

# PhishByte's Features & Benefits

## Platform Benefits

### Cost-Effective Security Awareness

Built specifically for Australian small and medium businesses, PhishByte delivers practical security awareness training and phishing simulations without enterprise complexity or inflated pricing. Transparent plans and a free starting tier make it easy to begin reducing human risk.

### Powerful, Purpose-Built Platform

PhishByte combines realistic phishing simulations, behaviour-based reporting, email sandboxing, and human risk scoring in a fully managed platform. Everything is designed to help organisations improve security awareness and reduce risk from day one.

### No Technical Expertise Required

PhishByte is designed to be simple to deploy and easy to manage. With an intuitive interface and guided workflows, organisations can run effective phishing and training campaigns without needing advanced cybersecurity expertise.

### Fresh Content & Regular Updates

Training content and phishing templates are regularly updated to reflect current threat patterns and real-world attack techniques. This ensures ongoing relevance and continuous improvement in employee awareness.

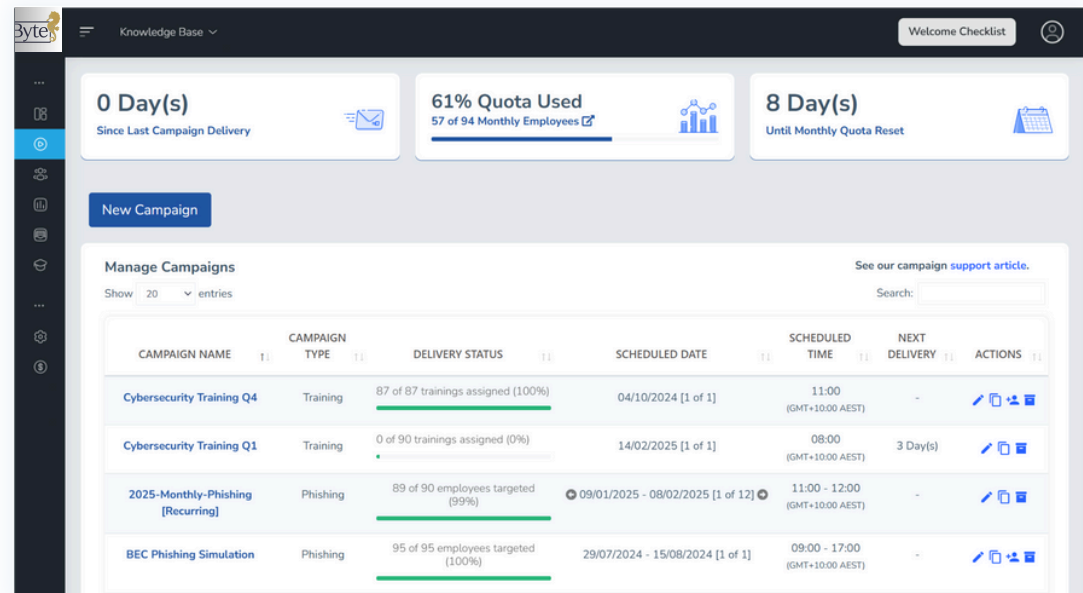

### Flexible Subscription Options

PhishByte offers flexible subscription plans to suit growing teams, including a free tier for up to 10 users. Organisations can scale their training program as their needs evolve.

### Cybersecurity Training Without Borders

With multi-language support and flexible campaign configuration, PhishByte enables organisations to deliver consistent security awareness training across diverse teams and working environments.

## Security & Privacy First

PhishByte operates on a platform designed to meet recognised security and data protection standards.

# Realistic Phishing Simulations

## Key Phishing Simulation Features

### 130+ Email Templates

A comprehensive library of realistic phishing email templates designed to reflect real-world attack scenarios. These simulations help employees recognise common tactics used by attackers before they encounter them in the wild.

### 80+ Phishing Websites

Access a wide range of realistic phishing landing pages that replicate the look and feel of trusted platforms. These simulations test how employees respond when prompted to enter credentials or interact with malicious sites.

### Conversational Phishing Scenarios

Simulate modern phishing techniques that unfold over multiple messages, mimicking real attacker behaviour. These scenarios help organisations understand how trust can be exploited over time, not just in a single email.

### Customisable Phishing Content

Create tailored phishing simulations that reflect your organisation's real environment. Clone real-world phishing attempts reported by your team or design custom campaigns aligned to your risk profile.

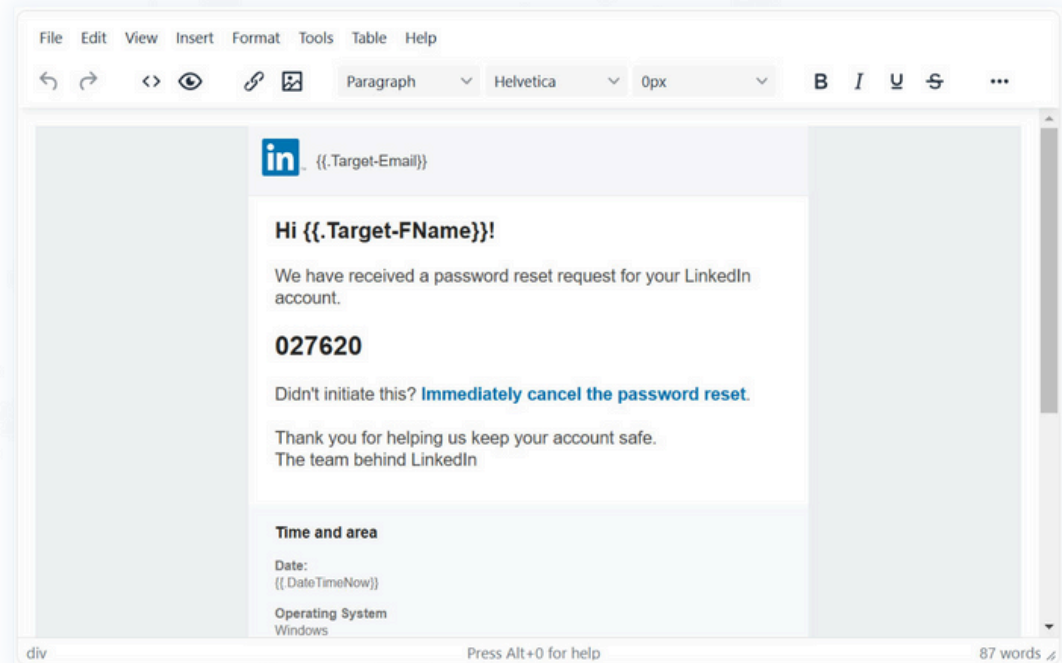

### Sender Profiles & Domain Lookalikes

Run realistic simulations using custom sender profiles and lookalike domains to mirror genuine attack techniques. This allows organisations to test how employees assess sender legitimacy and email context.

### Multi-Vector Attack Simulation

Test employee responses across a range of attack types — including phishing emails, malicious links, attachments, and conversational lures — to better prepare teams for today's evolving threat landscape.

# Interactive Security Awareness Training

## Key Training Features

### 50 Micro-Learning Training Modules

Short, focused training modules designed to fit into the workday. Employees learn practical cyber security behaviours through brief videos and interactive quizzes that drive retention without disruption.

### On-The-Spot Learning

When an employee interacts with a simulated phishing email, they're immediately guided to an educational landing page. This reinforces learning at the moment risk occurs — when behaviour change matters most.

### Customisable Training Content

Create or tailor training modules to align with your organisation's policies, risks, and industry requirements. Deliver relevant education that resonates with your workforce.

### Engagement-Driven Learning

Gamified elements such as badges, progress tracking, and completion certificates encourage participation and improve training completion rates across teams.

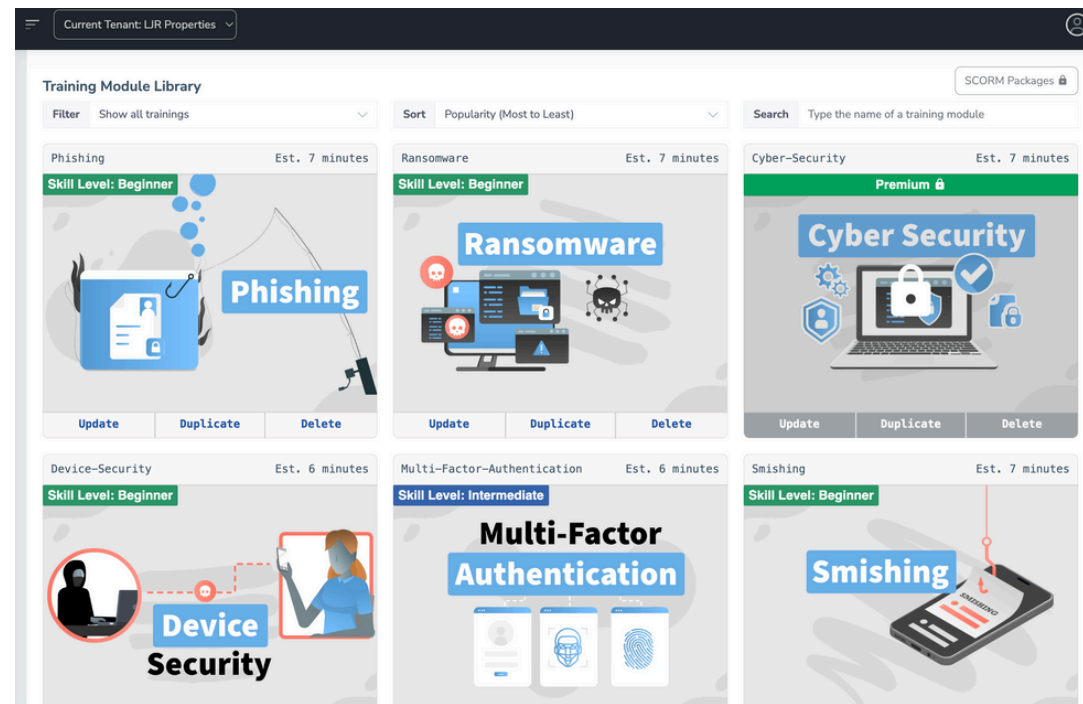

### Employee Learning Dashboard

Employees can view assigned modules, track progress, and download completion certificates from a simple personal dashboard — helping reinforce accountability and engagement.

### Human Risk Management

PhishByte tracks employee interactions across phishing simulations and training to reveal behavioural risk trends over time — giving organisations clear visibility into where risk exists and how it's improving.
